5. Battery power ON

Tests Supply Voltages

Remove all Control cable connectors (Analog and Digital Input/output connectors) from HLC1, HLC2. While Switch ON Battery supply observe is there any MCBs tripping. Wait for one or two minutes after switching ON Circuit breaker(MCB1) and observe for any overheating symptoms like smell, smoke, temperature etc. from the wire bunches. If any such symptoms are noticed, there might be a short circuit in the wire bunch. Check up once again continuity wherever suspected. After that check the Voltage levels at all equipments connectors as mentioned below.

Test Details	Acceptance	Observations
Voltage Level at HLC1 : I. Between wago terminal XF22S:03/54 and XF22S:03/58 II. Between wago terminal XF22S:03/53 and XF22S:03/58	~110VDC	OK
Voltage Level at HLC2 : I. Between wago terminal XF77S:03/52 and XF77S:03/56 II. Between wago terminal XF77S:03/51 and XF77S:03/56	~110VDC	OK

Note: After Above tests switch off the Power and restore all removed connectors and once again switch ON the 110 V Supply and ensure that no MCB tripping due to abnormality.

6. Converter operation (ON/OFF) test

Power supply is directly available to the Hotel Load Converter via Hotel Load Converter winding (2UH1-2VH1) and (2UH2-2VH2). As soon as BLDJ is closed power will be available to the Hotel Load Converter. Connect the test jig of Hotel Load Converter to the UIC and IV Coupler. Charge the locomotive and switch on the BLHO, LSHO indication should glow. Hotel Load Converter screen will show message "waiting for ON command". One by one Hotel Load Converter can be switched on by test jig. Finally both the Hotel Load Converter should be turned on simultaneously. Observe the flow of air from the air duct, this will ensure that Hotel Load Converter is ON. Both the Hotel Load Converters are ON, then voltage and frequency should be measured as per the table below:-

Converters should run without any irregularities.

Hotel Load Converter 1			Output Frequency (Hz)
U-V	V-W	U-W	
OK	OK	OK	OK

Hotel Load Converter 2			Output Frequency (Hz)
U-V	V-W	U-W	
OK	OK	OK	OK

7. Earth Fault Test

7.1 Input Earth Fault:-Ground the input terminal of the Hotel Load Converter using a proper resistance and then turn on the Hotel Load Converter. The converter should trip with the message "Input earth fault".

7.2 Output Earth Fault:-Ground the output terminal of the Hotel Load Converter using a proper resistance and then turn on the Hotel Load Converter. The converter should trip with the message "Output earth fault".

Note: These to be done for the both the converters (HLC1 and HLC2) separately.
